

GIB Suite Forecast (GSF)

Optimized Supply Chain Begins with Dependable Sales Planning

Accurate demand planning is critical for meeting customer commitments at the lowest total cost. Your business requires robust, intelligent forecast procedures that can automatically detect, predict and measure the varied buying habits of your customers. Inventory is a proxy for information. Improve your information, lower your inventory, and be more profitable.

Solution Overview

Automated Forecast Procedures: Data from many different sources can be included.

Intuitive Interface: Simple interface in Excel-like ALV Grid format.

Quick Decision Making: Automatic selection through tracking signals.

Your Benefits

Improve Forecast Accuracy: Algorithms and error calculations deliver reliable forecasts.

Constant Optimization: Rolling sales planning is continuously optimizing production plans.

Comprehensive Data Basis: Dependable requirements planning thanks to a comprehensive data basis.

Features and Functions

This solution can detect, predict, and measure customer buying habits. Additional features the GIB Suite Forecast (GSF) solution provides:

- Fully embedded in SAP, no additional hardware or interfaces
- Centralized and decentralized planning
- Automatic model selection
- Outlier management
- Bottom-up and top-down planning
- Collaborative and event planning
- Forecasting via workflow, traffic light, and alert features
- Mapping of organizational structures independent of SAP

Requirements

- Minimum of SAP ECC 6.0 EhP 4
- Optimized for SAP S/4HANA
- Requires a software maintenance contract, which includes Help Desk support and product updates
