

it.Grower Accounting Cockpit

Simplified Grower Accounting Process Flow with Totes Management

A simplified grower accounting process ensures that all transactions are accounted for in a timely, efficient and accurate manner. The it.Grower Accounting Cockpit provides multiple display and transaction functionality, with an enhanced view of weight ticket creation and quality management results. The solution enables weight ticket creation, goods receipt, posting of quality results, producer payroll with invoice splitting, transfer posting of direct procurement and consignment material, tote management, and tote payment.

Solution Overview

Simple and Cost Effective: Web-based solution with intuitive interface.

Role-based Access: Transaction access based on role assignment.

User-friendly, Actionable Interface: Easy weight ticket creation and quality management.

Your Benefits

Weight Ticket Management: Effective weight ticket management capabilities include the ability to attach and print documents in the weight ticket, as well as changing the status of the weight ticket dynamically from the Weight Ticket Monitor.

Tote Inventory Calculation and Payment: Tote management capabilities include the ability to do tote inventory calculation and payment, with automatic PO creation.

Split Payment to Growers: Input multiple payees and split up grower payments based on agreements.

Features and Functions

The it.Grower Accounting Cockpit supports the following:

- Weight ticket creation, copy and change functionality
