

it.Quality Management Cockpit

Mobilize your Quality Personnel

Good quality management requires an enhanced view of SAP quality management results in a mobile, user-friendly and actionable interface.

The it.Quality Management Cockpit provides quality managers with the ability to post results, create notifications, execute the notification process, certificate of analysis, and any approvals needed. To facilitate quick decision making on the shop floor, the solution provides dynamic analytic reporting on quality-relevant items such as vendor defects and inspection or notification aging analysis.

Solution Overview

Enhanced View of SAP Quality Management Results: View quality results via a mobile, user-friendly interface.

Web-Based Solution: Provides multiple display and transaction capabilities at source of inspection.

Easy Approval Process: Automatic triggering of email for usage decision and task status.

Your Benefits

Reduces Duplicate Data Entry: No one wants to deal with duplicate data. Eliminate the manual, error-prone results recording process to reduce duplicate data entry.

Immediate Notification Registration: Issue notifications for inspection failure immediately to save time and ensure defective stock does not get released.

Manage Stock in Real Time: Quarantine or release stock at the inspection source, in real time, to ensure only quality stock is released from production.

Features and Functions

The it.Quality Management Cockpit supports the following:

- Recording of QM inspection results and analytics for vendor defects, aging and inspection type
- QM usage decision and creation of notification through inspection lot, as well as triggering of email for usage decisions
- Quality notification processing and triggering of email based on task status
- Analytics for status of notifications
- Approvals
- Certificate of Analysis (COA)

Requirements

- Minimum of Release SAP S/4HANA 1610
- Minimum SAP Fiori prerequisites
- Minimum SAP NetWeaver Gateway Release 2.0 SP05 or higher
- Requires a software maintenance contract, which includes Help Desk support and product updates
