

it.RF Transactions

Improve Warehouse Communication and Processing Efficiency

Inventory management and production operations require speed, reliability and accuracy in processing the movement of individual goods. To ensure work is performed efficiently, at a lower cost, businesses need a simple and easy way to control individual processes using radio frequency (RF) transactions. The it.RF Transactions solution supplements SAP Inventory Management to improve warehouse processing efficiency with pre-built RF transactions.

Solution Overview

Fast, Error-Free Data Communication: Mobilizes data communications through RF devices.

Improved Warehouse Management: Simplifies inventory and picking processes.

Quick, Accurate Warehouse Communication: Real-time posting via RF transactions improves inventory accuracy.

Your Benefits

Inventory Management and Production

Operations: Provides inventory management and production operations transactions beyond the standard SAP transactions.

No Middleware Required: Since it.RF Transactions does not require any middleware, it reduces the effort required to get up and running quickly, saving you time and money.

Seamless Integration with SAP: It's relatively easy to implement additional processes or change existing functions, since the entire business logic lies within the SAP R/3 ABAP workbench.

Features and Functions

The it.RF Transactions solution provides support for the following:

- Goods receipt for purchase orders, production orders, delivery items and purchase order/production order reversals
- Goods issue and reversal to production order
- Goods issue to cost center and scrap
- Pick for delivery for picking goods with reference to outbound delivery
- Internal warehouse processes for material movement, physical inventory count and confirm production order
- Material inquiry to view stocks of the materials in the plan and storage location
- Batch Management and Serialization

Requirements

- Minimum of Release SAP S/4HANA 1610
- Minimum Release SAP ECC 6.0 EhP7
- SAP Inventory Management is active
- SAP ITS Mobile is active
- Does not include SAP Warehouse Management (WM) or Extended Warehouse Management (EWM functionality)
- Requires a software maintenance contract, which includes Help Desk support and product updates
